USA FCL Advisory Inland Challenges – Your problem our challenge

It has been reported in industry media that the USA trucking and intermodal market is facing challenges. The industry has been struggling to meet the growing demand for inland transportation, while facing the following conditions:

- Rail and ocean terminal congestion
- Shortage of qualified drivers, especially hazmat certified
- Shortage of equipment / chassis
- High load-to-truck ratio
- Tightening truck capacity
- Upcoming ELD mandate

As a result, all the above issues pushed the carriers' capability to do door deliveries to the limit. Most of them now start refraining from offering door-deliveries, or to a very limited extent.

This is where the FCL department @ SACO Shipping can make a difference in this challenging market.

Due to our widely based network in the USA and Canada and our years-on experience in this trade lane we are able to offer you door-to-door solutions for all your shipments to/from the USA and Canada.

Therefore we ask you to challenge us! Your USA/Canada inland problem is our challenge. Thus do not hesitate to send all your enquiries to our team. We will be happy to assist you.
